 **SOLAR ENERGY**

SOLAR PANELS

V-TAC proudly introduces Solar Panels to its broad catalogue of innovations to improve energy efficiency in residential, commercial, and industrial establishments. Converting sunlight directly into electricity, create a photovoltaic (PV) system with our new monocrystalline solar panels – proven more efficient as they are made of a single silicon crystal, hence the higher efficiency. The electrons that generate a flow of electricity have more room to move, and as a result, monocrystalline solar cells are more efficient than their polycrystalline solar cell counterparts. Our Solar Panels are also engineered for a positive power tolerance, ensuring that they will always produce more power equal to or greater than their rated power. PID Resistance make sure that our solar panels maintain their power efficiency despite high voltages, high temperatures, high humidity, and other potential factors. The excellent performance in the low- light environment is attributed to the solar panels' advanced glass and cell surface textured design.

- Monocrystalline solar panels
- Half-Cell Modules – reduces mechanical stress & resistive losses; optimises efficiency
- PID Resistance – maintains efficiency for a long period of time
- Low Light Performance – works and produces enough power even in low-light conditions; ideal despite cloudy or snowy weather conditions
- Weatherproof junction box included
- Resilience to Weather – Certified to withstand wind loads of up to 2400 Pa and snow loads of up to 5400 Pa. Frames topped with anodic oxidation layer resistant to corrosion
- ISO & IEC Certified

LED BULBS High CRI Bulbs

Our highest CRI rating yet – V-TAC's new generation of CRI>95 spotlights & bulbs is a must in commercial lighting. A CRI of 85 to 90 percent is considered good at color rendering, while a CRI of 90 percent or above is considered excellent. A CRI index of 90 or above should be used to achieve accurate color discrimination.

A red apple appears red because it reflects red wavelengths, but absorbs others. But not all white light sources have the same amount of red wavelength light. As a result, under different light sources, a red apple can reflect different amounts of red light, changing its appearance.

- Outstandingly engineered to show only the truest of colors
- Emphasize vivid colors to increase the appeal of any product to its consumers and contribute to purchasing decisions
- Recommended for restaurants, apparel shops, supermarkets, and other retail areas
